Formal Techniques for Data Base Design

005.74
F992f

Springer-Verlag Berlin Heidelberg New York Tokyo

Table of Contents

1	General Introduction – Two Approaches to Formal Data Base Design	1
	Part A – Application-Oriented Approach	5
2	Introduction to Part A	7
3	An Informal Outline	9
3.1	Information Level	9
3.2	Functions Level	10
3.3	Representation Level	12
3.4	Placing the Formalisms	13
4	The Information Level – The Use of Logical Formalisms	15
4.1	Logical Formalisms	15
4.2	An Example	17
5	The Functions Level – The Use of Algebraic Formalisms	19
5.1	Algebraic Formalisms	19
5.2	Obtaining a Functions Level Specification – An Example	20
5.3	First to Second Level Refinements	23
5.4	Proof of Correctness of the Refinement – An Example	26
6	The Representation Level – The Use of a Programming Language Formalism	29
6.1	Programming Language Formalism	29
6.1.1	Syntax – The Use of a Grammatical Formalism	29
6.1.2	Semantics – The Use of a Denotational Formalism	34
6.2	Obtaining a Representation Level Specification – An Example	37
6.3	Second to Third Level Refinements	38
6.4	Proof of Correctness of the Refinement – An Example	40
	Part B – Semantic Data Models	45
7	Introduction to Part B	47
8	The Logical Database Model	49
8.1	The Semantic Framework	51
8.1.1	Reality and the Real World States	52
8.1.2	The Natural Language State Description	53

8.1.3	The Abstract Model and the Standard Interpretation	53
8.1.4	The Logical State Description and the Interpretation I_{DB} . . .	54
8.1.5	Conventional Data Bases – The Syntactical View	57
8.2	The Logical Data Definition Language	58
8.2.1	Type Declarations	59
8.2.2	The \langle Type Definition \rangle Clause of a Type Declaration	60
8.2.3	The \langle Characteristics \rangle Clause of a Type Declaration	62
8.2.4	The \langle Identification \rangle Clause of a Type Declaration	63
8.2.5	Relation Declarations	65
8.2.6	The \langle Domain Definitions \rangle Clause of Relation Declarations .	65
8.2.7	The \langle Consistency Constraints \rangle Clause of Relation Declarations	65
8.3	The Logical Data Language LDL	67
9	The Entity-Relationship Model	71
9.1	The Entity-Relationship-Value Concept	72
9.1.1	Level 1: Entities, Relationships, Values	72
9.1.2	Level 2: Entity-Relationship Diagram	75
9.1.3	Level 3: Entity Relations, Relationship Relations and Relation Tables	75
9.2	Data Types and the Entity-Relationship Model	78
9.2.1	Generalization/Specialization	79
9.2.2	Aggregation	81
9.2.3	Grouping	81
9.3	Existence and Identification Constraints in the Extended ER-Model	83
9.3.1	Constraints Related to Generalization/Specialization	83
9.3.2	Constraints Related to Aggregation	84
9.3.3	Constraints Related to Grouping	85
9.4	An Example Using the Extended ER-Model	85
10	The Temporal Hierarchic Model	87
10.1	The Basic Concepts of THM	87
10.2	The Notions of Time in THM	89
10.3	The Operational Facilities of the Temporal Hierarchic Model . .	93
10.3.1	The Basic State Manipulation Actions	95
10.3.2	Complex State Manipulation Actions	99
11	Conclusion	105
12	References	107
13	Subject Index	113
